Company Offers Nurse Documentation Stations, Storage Cabinets Through Agreement

The surgical storage systems and documentation stations will help broaden options for integrated surgical suites

MENTOR, OHIO – September 29, 2009 – In addition to its high quality line of stainless steel case goods, STERIS Corporation (NYSE: STE) will now be offering Stanley® InnerSpace® modular laminate storage and station options for the perioperative environment. Through a distribution agreement, the two companies will offer selected models of InnerSpace nurse documentation stations and storage cabinets through STERIS's market channels.

"We have expanded the breadth, depth and price range of our surgical storage and station offering in response to the needs of our Customers," states Ward Sanders, clinical services manager for Surgical Solutions at STERIS. "We are pleased to be working with Stanley InnerSpace to provide an economical, quality alternative for design professionals, architects and hospitals."

Through this agreement, STERIS will offer a selection of InnerSpace's most popular modular pieces and InnerCell modular accessories. These include highly versatile modular nurse documentation stations, which are designed to house the necessary audio, video, and data storage and communication equipment for an integrated operating suite. These high-quality pressure laminate units will be offered in two standardized widths and a variety of design-friendly colors. Seven modular storage cabinet options will also be available, along with the most popular InnerCell accessories for efficient, flexible storage of critical surgical supplies and equipment.

"InnerSpace nurse documentation stations offer a multitude of practical features," comments Dan Schroeder, vice president of strategic and corporate sales. "For example, one tall cabinet holds most of the integration equipment, and the unit has flexible outlet, phone and internet connection capability. The cabinets are ventilated for heat diffusion and there are multiple cable pass-through openings for easy set-up. And the pull-out work surface allows a view of the surgical field."

The distribution agreement will allow the two companies to streamline sourcing for hospitals and will help healthcare providers to tailor ideal options that maximize efficiency in their particular surgical rooms. The InnerSpace systems will be sold collaboratively and serviced by InnerSpace. For more information, visit www.steris.com [1].
