

Cover-Up Culture Has Slowed The Patient Safety Movement

George Lundberg, M.D.

Promoting patient safety, preventing medical error, preventing physician error, preventing errors in diagnosis, preventing nurse error, preventing surgical error, preventing communication error, preventing health illiteracy error, preventing errors from language barriers, preventing laboratory error, preventing computer error, preventing patient mix-ups, preventing right and left side of body mix-ups, preventing mistakes, since mistakes are the stepping stones to failure.

Recognizing human frailty, recognizing physician humanity, recognizing system fallibility, owning up to problems, eliminating cover-up, acting out professionalism, recognizing that professionalism means self governance, individually and as groups.

Self criticism, peer criticism, a culture of peer review, honesty, truth, disclosure, fairness, and negotiated settlements.

Objective evaluation and commitment to quality. Quality improvement by preventing error. Systematic error, systematic prevention of error. An error caught before an action is taken based upon that error is, in effect, not an error.

These are the fundamental truths that the patient safety movement is all about.
