

## **Breaking News! Operations Take Longer When Residents Are Involved**

The Skeptical Scalpel

Yes, you heard it here first. A new study shows that for six common laparoscopic procedures, resident participation resulted in the surgery lasting from 20% to 47% longer.

The six laparoscopic operations were appendectomy, cholecystectomy, gastric bypass, fundoplication, colectomy, and inguinal hernia.

The paper, published in the Journal of the American College of Surgeons, culled the frequently mined NSQIP database for information on 89,720 operations. The database receives input from a large number of US hospitals, both teaching and non-teaching.

The key results were as follows:

[Continue reading...](#) [1]
