

Cardinal Targets Improved ASC Profitability, Efficiency

Cardinal Health's Presource® Products and Services and Clinical Apparel/Patient Protection businesses conduct full clinical and logistical assessments in identifying supply chain pain points and recommending product and workflow solutions to reduce inventory, promote staff safety and productivity, and improve cost effectiveness.

Now, when Cardinal Health's supply chain assessments identify surgery centers that may benefit from improved revenue cycle management practices, the company will connect those customers with Genascis, which provides revenue cycle management services to more surgery centers than any other company in the United States. A revenue cycle management specialist from Genascis can then make strategic recommendations regarding how the surgery center can improve overall profitability by implementing new charge capture, coding, billing and reimbursement processes.

Leveraging the Genascis proprietary database, which contains revenue cycle management data, processes and best practices for more than 700 surgery centers nationwide, customers will also be able to benchmark their overall fiscal performance against their peers and identify specific best practices.

For more information from Genascis, call (866) 208-7348, extension 265 or go to www.genascis.com [1].

For more information about how Cardinal Health's Presource Products and Services business can help you improve supply chain efficiency, e-mail PresourceSolutions@cardinalhealth.com.
