

STERIS And Toshiba Join Forces For Hybrid Suites

STERIS Corporation and Toshiba America Medical Systems, Inc. have formed an alliance to offer advanced vascular, cardiovascular, pediatric and neurosurgical hybrid surgical suites to healthcare systems seeking the latest patient-focused interventions. These advanced suites will work to blend the contributions of both medical device companies.

Toshiba will provide tableside digital information and imaging technologies, while STERIS will deliver custom-designed LED surgical lighting and visualization systems, as well as Harmony iQ™ advanced integration and OR equipment management solutions. In addition, STERIS's room design services, including its three-dimensional Room Builder software and project management expertise, will allow the two companies to design and integrate their technologies. The resulting hybrid suites hopes to allow surgical and diagnostic teams to carry out a range of image-guided cardiovascular, vascular and neurosurgical interventional procedures, as well as open surgeries.

STERIS Corporation is a leading provider of infection prevention and surgical products and services, focused primarily on critical healthcare, pharmaceutical and research markets around the world.

With headquarters in Tustin, California, Toshiba America Medical Systems (TAMS) markets, sells, distributes and services diagnostic imaging systems, and coordinates clinical diagnostic imaging research. Toshiba Medical Systems Corporation is a leading worldwide provider of medical diagnostic imaging systems and comprehensive medical solutions.
