

Ampronix Celebrates 30 Years In The Medical Imaging Industry

Today Ampronix celebrates its 30th anniversary in the medical industry. Since 1982, Ampronix has established itself as one of the leading medical imaging companies, providing products and solutions that can compete with the ever-increasing technological demands of the healthcare industry.

Ampronix's success stems from its development of original medical equipment. After years of hands-on experience repairing other manufacturers' products, Ampronix decided to change its approach to business, ultimately adding a sales department in 1986. With the success of this department, it was evident that Ampronix could generate a higher volume of business without compromising its value or service standards.

By maintaining relationships with Original Equipment Manufacturers, Ampronix has allowed for substantial price discounts on its sales. In 1998, Ampronix added a research and development department to compete with the increasing demands of the medical industry. This key department contributed to Ampronix's success by developing some of the company's most successful products that are focused on solving medical dilemmas ranging from CRTs to LCDs. In 2006, Ampronix moved to its current location in Irvine, California due to the company's rapid growth.

"Ampronix has had a successful 30 years because we have always focused on customer satisfaction and creative, cutting-edge products," said Nelson Fathollahi, President and CEO of Ampronix. "We pride ourselves on our reputation as a leader in our market, so we will continue striving to improve and innovate."

Ampronix has been recognized as one of the leaders in the medical imaging industry with products that include modality solutions, surgical displays, PACS/Clinical Review displays, DICOM converters/capture devices and printers/recorders. Because of its technology and versatility, Ampronix has been recognised by Sony Electronics, Inc. for being a leader in the medical imaging industry and has received an "Innovations In Healthcare Award" from the Adaptive Business Leaders Organization for providing medical imaging solutions on a global level.

Ampronix provides the only multi-modality product on the market that auto synchronizes to any legacy color or grayscale analog and digital modality for Cath Lab, MRI, CT, RF rooms, C-Arm, Endoscopy/Surgical, Portable X-Ray and Nuclear Medicine applications.
