Osteotome Racks

The Lambotte Osteotome Rack has been designed to protect and store a complete set of six straight and six curved Lambotte osteotomes ranging in size from ¼-inch to 1½ inch. Outlines and sizes have been etched on the base of the rack for easy identification and quick placement. In addition, the lid is detachable and can be easily removed for access. The Lambotte Osteotome Rack is completely autoclavable and is made from lightweight anodized aluminum. Silicone holders hold the osteotomes safely and securely during transport and processing. Handles have also been affixed to each side for easy transport.
