Shoulder Wrap

The 1509 PneuGel[®] Shoulder Wrap is designed for cold Therapy and compression for post-op or post-injury situations. This shoulder wrap utilizes patented bi-component PneuGel technology. Two bladders are included, making it possible to freeze one while wearing the other. A freezable gel compartment provides 35 to 40 minutes of cold therapy, while terry cloth provides next-to-skin comfort. The gel bladder is backed by a separate inflatable air compartment that provides support and compression. The accessible air valve allows for easy inflation or deflation. A nylon fabric/foam cover with a Velcro strap and adjustable body strap firmly holds the PneuGel bladder next to the body.
