

Sterilization-Resistant Labels

Designed for wet, dry and radiation sterilization processes, these computer imprintable labels are resistant to autoclaves, chemicals, detergents, washing and temperature extremes of up to 400 degrees Celsius. The labels are perfect for identifying instrument trays, microsurgical/medical devices and much more. The labels are available in a wide range of durable materials and can be supplied blank or pre-printed with logos and color-coding. Printed variable data such as lot, batch and serial numbers, as well as 2-dimensional barcodes, can be added in-house with a thermal transfer or laser printer.
