Wireless Foot Switch

Linemaster's infrared wireless foot switch eliminates the nuisance of wires under foot. The non-line-of-site design transmits a signal in a 360-degree pattern. A twin channel foot switch is available with up to five functions, with a single version also available. Four transmitters can be used in same area without interference. Using three AA batteries, battery life is 200 hours at 50 percent duty cycle. The transmitter is IP68 rated, and the receiver runs on 6vdc, though other voltages are available. This foot switch is designed to meet UL60601-1, CE, and EMC EN 60601-1-2 requirements.
