

Steam Sterilization Integrators

SteriScan® Steam Integrators provide biological indicator accuracy and chemical indicator convenience. They integrate time, temperature, and steam, assuring accuracy at all times and temperatures, not just at certain times. SteriScan Steam Integrators are designed to provide an additional margin of safety over and above biological indicators, thereby reducing the risk of an unsterile pack. This accuracy makes the product ideal for use in each pack and for all types of sterilization processes. SteriScan Steam Integrators can be used in flash, gravity and vacuum steam sterilization processes.
