

Surgical Lights With Monitor Mounts

Stellar Surgical Lights include advanced, focusable, high intensity optics that provide up to 160,000 lux (ST29) or 130,000 lux (ST23) per lighthead. Cool shadow-free illumination provides maximum intensity without glare at any distance. State-of-the-art polymer lighthead construction features feather-light maneuverability and unyielding durability, optionally voice or touchscreen activated. Lighting systems are also available with flat panel monitor arm(s) and/or an equipment carrier, permitting flexible designs provide delivery of monitors around the entire surgical field when and where they are needed most, along convenient storage overhead when not required.
