

Cleaning Hose for Power Handpieces

The Cleaning Hose was developed to prevent cleaning detergent and water from damaging the internal components of power handpieces during the decontamination process. Previously, technicians were instructed to leave the full eight or ten foot hose in place, but Spectrum's modified Cleaning Hose eliminates the need for the hose and offers a more convenient approach to cleaning. Made from the same components used to produce an actual air hose, the Cleaning Hose is a modified and shortened hose, which attaches to the handpiece exactly like an air hose, making it simple to use.
