

## Needle Electrodes

**Booth # 1453** MEGADYNE has added four new product additions to its MEGAFINE needle line. The latest configurations added to the 2-inch and 2.5-inch long MEGAFINE needle product family include two 45-degree angled electrodes of varying lengths; a 90-degree angled electrode; and a 6-inch extended electrode. MEGAFINE needles feature a patented, green E-Z Clean<sup>®</sup> non-stick coating. Designed to cut and coagulate at lower power settings, MEGAFINE needles produce less thermal damage and eschar build up, and require fewer cleanings.
