

Portable Pressure Relief Pad

Booth # 128 TableGard is a portable dynamic pressure-relieving pad for use in the OR that provides Quattro Therapy, a dynamic 4-chamber sequentially alternating system that delivers continual pressure relief during extended surgical procedures. TableGard's small, battery operated pump can operate silently for up to 36 hours on single charge. This system's lightweight portability allows it to be transported along with the patient from the OR table to PACU, and then to the patient's room. TableGard is also useful in the emergency room or other holding areas where patients may be kept for extended periods.
