

Resuscitation Medication Guide

The Broselow[®] Pediatric Resuscitation Medication Guide is a companion aid to the Broselow Pediatric Emergency Tape. The guide provides preparation and administration information for resuscitation drugs and clinical organizational flow charts for point-of-care drug administration. The book is divided into color sections which can be accessed by known weight or a single Broselow Tape measurement when weight is not available. Each section has preparation and administration information by color zone which provides drug volume amounts for each drug using preferred drug concentrations.
