

Applicator Swabs

Birchwood Laboratories now offers 8-inch Scopettes, Jr.® applicators with a non-sized swab head. This new 8-inch version provides clinicians with a choice of either non-sized or sized swab heads on the most popular large-tip applicator length. The non-sized 8-inch Scopettes, Jr. feature softer, “fluffier”, and slightly larger heads on the same rigid, rolled-paper sticks as those with sized swab heads. Since introducing its unique 12-inch Scopettes applicators last year with a non-sized tip, a majority of clinicians providing feedback say they prefer the non-sized swab. Scopettes applicators have a full 3/8" cushioned tip, minimizing trauma to delicate tissue. They are available in cases of 500 and in 100-count boxes (12 per case).
