

Low-Cost Endoscopic Camera

The Telecam[®] DX II camera control unit (CCU) is specifically designed to offer affordability with broad capabilities. Developed for office-based applications, this camera system relies on fiberscope filters to remove moiré patterns and pixelation from images generated by flexible telescope scopes. Precise Auto-exposure and Brightness Control are used to maximize the quality of every image. Interchangeable adapters for the Telecam DX II are available in 12, 25, 30, and 38 mm focal lengths. Programmable buttons give the physician complete control over as many as four camera functions directly from the camera head. And the system's freeze-frame capability allows the physician to freeze images for discussion with patients or colleagues, or for diagnostic interpretation.
