

Patient Positioning Table

Designed for use in surgical suites where control and patient positioning are critical, BERCHTOLD's OPERON® B 810 is a feature-rich general purpose surgical table with flexible articulation for precise patient positioning and maximum weight capacity throughout its entire range of motion. The carbon fiber tabletop and integrated x-ray cassette channel offer optimal imaging clarity and access with the widest imaging window available. The sliding tabletop enhances imaging coverage without requiring table rotation or costly additional table sections. The unique backlit hand pendant makes this table ideal for all Endoscopic and Arthroscopic procedures. These features, coupled with a sculpted base design for surgical team access and a complete line of patient positioning accessories, make the B 810 surgical table ideal for handling all patient positioning needs.
