## Insertion Site Dressing

The SilvaSorb® Site Dressing helps protect insertion site areas from dangerous bacteria including MRSA and helps reduce the chance for infection. The dressing's unique design and silver antimicrobial technology offers several advantages over other site dressings including superior protection around the wound site. The infection-controlling SilvaSorb Site dressings are available in two sizes, depending on the diameter of the percutaneous device. The dressing wraps snugly around catheters, CV lines, feeding tubes and other medical devices inserted into the skin.
