

Transportable Equipment Carrier

The Mini-Dock-IT System provides a compact and easily transportable, detachable equipment carrier equipped with customer preferred MIS equipment and FS Monitor of choice. The Mini-Dock-IT system allows for the quick swapping of video carts per surgeon preference, while adding speedy mobility of transport for equipment where needed most, or from room to room. For hospitals required to maintain MIS equipment portability among specialties, those with unique equipment needs, and/or those who cannot afford to dedicate MIS equipment in every room, the Mini-Dock-IT System provides the ultimate in flexibility to do more.
