Warming Blankets

Cincinnati Sub-Zero's WarmAir® unit and FilteredFlo® blankets combine to provide patients with safe and effective warming therapy. The WarmAir warming system provides double air filtration, protecting the patient from airborne contaminants. FilteredFlo air blankets conform to the patient's body to deliver evenly distributed warm air without a hint of blowing air or discomfort. These blankets are lightweight, easy-to manage, will not "fly away," and may be folded back to provide access to the patient. FilteredFlo blankets also include extra material to fully cover your patient, eliminating the need for additional blankets. The blankets are available in upper body, lower body, torso, sterile cardiac, full body adult and pediatric sizes.
