

Endometrial Sampling Devices

Miltex is offering three new sterile and disposable Endometrial Biopsy Cannula products and Sampling Sets for OB/GYN applications. The Endometrial Biopsy Cannula are offered in both a SoftFlex[™] and FirmFlex[™] style for easy one-step sampling. The SoftFlex[™] is ideal for standard or routine patient sampling applications where a more flexible cannula is desired by the clinician. The FirmFlex[™] is a slightly more rigid cannula ideal for more controlled insertion and sampling in patient cases where endometrial atrophy or cervical stenosis is a concern. The Endometrial Sampling Set includes a disposable plastic Curette and 10 ml Twist-and-Lock Syringe system made of clear, latex-free polypropylene and has a Semi-Rigid design with a slightly curved and tapered Randall-type cutting edge tip which optimizes access to the uterine contours and efficient sample collection.
