

Fiberoptic Headlamp System

Teleflex Medical introduces the latest advancement in O.R. lighting technology. The XenaLight[®] fiberoptic headlamp system offers brilliant white light that maintains consistent quality and intensity throughout the life of the lamp. Acquisition cost is lower than xenon and the unique XenaLight bulb, with its 1250-hour lamp life, saves time and money. XenaLight's compact design (less than one square foot) remains cool even after hours of use, and its patented CoolLux[®] port prevents heat migration. The headlamp, with its lightweight construction and fine adjustment, remains comfortable even in the longest cases.
