

Laparoscopic Procedure Cart

The Starline[®] Laparoscopic Procedure Cart is built to organize and provide ready access to instruments and equipment. An over-bridge and shelf put scopes and light sources at easily accessible heights, keeping the top work surface free to hold instruments. Swingout side storage units increase workspace by 135 percent and provide additional storage space. When not being used, the side storage units fully retract to reduce occupied floor space. Full extension drawers with removable totes provide convenient access and renewal. Drawer dividers are available to organize supplies for easy access. Color-coded drawer pulls are available in an array of choices to fit any system or décor, as well as label holders to quickly identify drawer contents.
