

Light & Monitor System

The NUVO Light and Monitor System features total control of all light and image selection functions from controls located in the sterile field. The light also features excellent shadow reduction packaged in a compact, easy-to-position light head as well as a state-of-the-art cooling system to deliver color-correct, ultra-cool light. Combined with the surgical monitor, it provides a single integrated system that optimizes the surgeon's ability to view endoscopic procedures. This system also optimizes positioning and posture during surgery.
