

Surgical Site Marking System

The VeriSite Patient Labeling System features a unique numbering system that is an effective tool for documenting, auditing, surveying, and evidencing compliance with surgical site marking requirements. This numbering system acts as a 'date and time stamp' in the patient's file, substantiating the surgical team's compliance to the facility's policies and procedures. The VeriSite labels cost less than \$1.50 per patient and could save facilities millions of dollars from a single lawsuit.
