

## Deep Tissue Retractor Stays

**Booth # 1934** Long Finger Deep Tissue Stays provide optimal exposure at the surgical site by retracting larger amounts of muscle, fascia and fat. These stays can be used with any of the Lone Star Retractor Rings. Used together, the stays and rings comprise the original Self-Retaining Retractor System™, excellent in a variety of applications; including general surgery, urology, head & neck, gynecology and colorectal surgery. These larger stays are available in single blade, 2 and 3 finger models. Each is double sterile packaged in a tray of 4, for easy delivery to the operative field.
