

Diagnostic Ultrasound System

Booth # 1611 The ProSound Alpha 5 digital diagnostic ultrasound system is ideal for use in the operating room. Aloka's ProSound technology transmits and receives noise-free signals providing diagnostic information in pure sound field. Aloka's advanced microcircuit technology provides for large-scale integration of the electronic circuit allowing creation of the high-density digital front-end. The resulting crisp and clear image will contribute to efficient and accurate examinations. The system also features up-to-date functions which include Microspatial Compounding for a more densely rich image, Pixel-Focus for sharp detail in both near and far fields, and iDMS for hassle free image storage and retrieval. Alpha 5 will work with Aloka's wide variety of surgical specialty transducers.
