

Laparoscopic Training Unit

Booth # 2101 SimuVision is a new technology that provides the familiar look and feel of an actual laparoscope that can be used to effectively train laparoscopic skills and techniques outside of the operating room. Simulab has accomplished this by leveraging PC technology in combination with a boom-mounted digital camera that is housed in their exclusive laparoscopic training unit called the LapTrainer. The LapTrainer with SimuVision is an affordable, innovative laparoscopic trainer featuring digital video technology that allows the user to easily maneuver around and zoom in on the operative cavity.
