

Stretchers

Hill-Rom has added a four-corner brake and steer option to its TranStar® Stretcher line. The new option will allow caregivers to activate the brake and steer functions from any of the four corners of the stretcher. This no-cost option allows for easier positioning, enhanced maneuverability and additional safety for both the patient and the caregiver. TranStar Stretchers also feature dual-action, four-wheel brakes, OneStep® TuckAway side-rails for zero gap transfers, ergonomically designed push handles and the Steering Plus® system for superior maneuverability and cornering.
