In-Bed Bathing System

The BodyVac In-Bed Bathing System provides a safe and efficient way of bathing non-ambulatory patients, an often time-consuming and hazardous task. The mobile BodyVac eliminates the need to lift and transfer patients in order to give them a full-body soap and water bath and shampoo their hair. The sheets remain dry, while the patient remains warm and comfortable. The system is especially useful in more challenging applications such as with Orthopedic, Oncology, Cardiac, Spinal Injury and Burn patients.
