

## Electrosurgical Needles

Extra sharp, precision MEGAFine<sup>®</sup> needles help make electrosurgery cleaner and faster. One of the sharpest needle points available, MEGAFine needles feature the patented, green E-Z Clean<sup>®</sup> non-stick coating and cost about 60 percent less than other micro tips. Designed to cut and coagulate at lower power settings, MEGAFine needles produce less thermal damage, reduced eschar build up and less smoke for a clearer field of view. Configurations include the 2-inch and 2.5-inch long needle, 45-degree angled electrode, 90-degree angled electrode, and 6-inch extended electrode.
