## Image Capture Unit

The Medicap USB100 allows surgeons to capture images with a touch of a button. This low cost device is simple to install and operate. Simply plug the USB100 into existing imaging equipment's video connectors, press the capture button and the image on the monitor is saved to a USB flash drive. Once finished, the drive can be removed and inserted into any USB compatible device such as a PC, laptop, or web-pad to view, enhance, and share the images.
