

Mobile Digital Imaging System

The Dome Surgery Review Cart family is a line of mobile display workstations designed to help hospitals improve digital imaging capabilities in the OR for better patient care and faster response to emergency situations. The Dome Surgery Review Cart solves application challenges particular to the OR, such as space limitations, costs and disruption associated with remodeling, sub-optimal lighting conditions and cleanliness. Available in different configurations, including color and grayscale options, the Dome Surgery Review Carts enable referral and diagnostic viewing of imaging modalities including X-rays, computed tomography (CT), magnetic resonance (MR), nuclear and ultrasound in an easy-to-clean, all-in-one solution. All configurations of the Dome Surgery Review Cart come as dual-headed (two side-by-side monitors) systems and include Planar's Dome Cextra®153 software.
