

Personal Infection Control Kit

The Personal Protection Belt provides instant access to infection control tools such as gloves, tissues, and surface wipes, allowing healthcare workers to sanitize hands or workstations without going to the supply closet. The belt features removable hook and loop pockets, holsters, and pouches allowing workers to keep a variety of supplies ready for on-the-spot use. Medium holsters are perfect for lotions, instant hand sanitizers, and surface wipes, while two pockets with fold over flaps provide space for gloves, antibacterial wipes, tissues, scissors, notepads and sprays. Additional components include a pen pouch and clear ID pouch.
