

Protective Barrier For Implantable Devices

The Universal Bump Cover is a non-intrusive barrier that can be worn on top or underneath clothing and protects implant sites from bumps, falls and daily activities that can cause intense pain or potentially damage the device if not properly protected. This plastic cover's innovative design features a series of straps that secure it to the wearer's body. Maximum comfort is made possible by a cushioned rim that surrounds the cover. The Universal Bump Cover also can protect areas such as boils, implanted ports, burns, wounds and PIC lines.
