

Bariatric Transport System

The Skytron Bari-Transport 1000 is a stoutly designed combination stretcher/wheelchair that provides comfortable, safe and easy transport of exceptionally large patients weighing up to 1,000 pounds. The system is designed to significantly reduce the need for extra staff and/or equipment for transport with product features including power height adjustment, Trendelenburg, Reverse Trendelenburg, battery operation that includes a retractable power cord for convenient battery charging, and a battery status indicator. Additional features include power assist recline, chair, table and seat assist positions to enhance patient ability to get on or off of Bari-Transport 1000 in seated position. The System is equipped with 6 large casters (including 2 lockable EZ-steer casters) and manual one-touch foot-lock brake and assist push/pull bar. It also includes independent manual split legs, adjustable height IV Pole, oxygen bottle holder and more.
