

## Diagnostic Ultrasound Systems

TeraRecon offers three unique ultrasound systems: the Imagic, UF-850XTD, and the UF-750XTD; along the Aquarius Sonic Server, with an ultrasound reporting and image management system. Both the Imagic and UF-850XTD are fully digital, cart-based systems used for multi-purpose imaging applications. The Imagic also provides high-end cardiovascular imaging. The other system, UF-750XT, is a multi-modality portable ultrasound scanner and delivers a compelling price-performance combination for a wide range of clinical applications. The images produced by all three ultrasound scanners (and any other DICOM scanner) can be sent to the Aquarius Sonic Server for review and reporting from any PC connected to the same network as the server.
