

## Integrated Intraoperative Tourniquet

InstruMed has incorporated LiveData's OR-Dashboard&reg System into their SmartPump Tourniquet Systems, allowing intraoperative tourniquet data to be visually integrated and displayed. The OR-Dashboard displays real-time tourniquet pressure and elapsed time graphically alongside real-time blood pressure and pulse readings. This enhances tourniquet management and patient safety. SmartPumps also support OR staff with an optional Tourniquet Report printer, providing intraoperative Nursing Data in the form of a Tourniquet Report. This AORN compliant report is automatically generated on a 2- by 3-inch self-adhesive label that attaches to the patient record.
