

Procedure Specific Storage Carts

These mobile, procedure specific storage carts allow hospital personnel to easily transfer inventory supplies from the store room to the procedure room. The full-size procedure carts are available in standard configurations such as GI Staple, Orthopedic, Vascular, and more. The modular, inner-cell system and interchangeable storage accessories, which includes divided plastic trays and wire baskets, helps surgery departments maximize storage capacity and efficiently manage supplies. In addition, the full-size procedure carts are now available with a keyless entry touchpad, making it easier to retrieve a device when it is needed without fumbling through keys.
