

## Wound Drainage Systems

Shippert Medical carries a full line of wound drainage products to treat post-operative seromas. The Seromacath wound drainage system is designed and clinically proven to effectively treat post-operative seromas following mastectomy, axillary dissection, groin dissection, latissimus dorsi flap, TRAM flap, liposuction, abdominoplasty, breast implants, and other procedures. Additional available models include round, flat and fluted drains; as well as bulb evacuators, catheters, and collection units. All drains are available in several sizes and with optional trocar. The bulb evacuators are available in low (comparable to Jackson Pratt), medium, and high suction.
