

Overhead Cabinets

Lista's versatile overhead cabinets provide an excellent storage solution for items of unique size or shape that cannot be conveniently stored in modular drawers. The overhead cabinets are 15 inches deep and are available in 16-inch or 29-inch heights and a variety of widths to suit individual storage needs. They can be wall-mounted, or supported above a work surface using a riser shelf. Overhead cabinets also attach to the frame of the Lista Nexus[®] System for above-the-work surface storage. Available with sliding, hinged, or retractable doors, the overhead cabinets feature a locking system to protect stored materials. For greater customization, the 29-inch high overhead cabinets include shelves adjustable at one-inch increments. All overhead cabinets offer an optional canopy top for a clean, finished appearance.
