

Specimen Transport Bags

This two-part low-density polyethylene (LDPE) specimen transport bag is leak resistant with two separate pockets usable for samples and documentation. The 6-inch by 9-inch bag features a fold-over Adhesive Ribbon seal. This creates a solid tamper-evident visual seal across both sections of the bag to keep employees and contents safe from contamination. These bags are available with custom absorbent inserts, printing and sizing options. Qosina also offers additional sizes of specimen bags, transfer forceps, specimen cups and collection vials.
