

Surgical Drapes

UltraGard® drapes are constructed from a quality, multi-layer SMS material that possesses excellent barrier properties, including high resistance to fluid penetration, low-lint, and flame retardation. These drapes are available for every major procedure, and are utilized in Precept's full line of surgical packs. Precept also manufactures a line of drapes from Softesse® material by DuPont. Softesse has been a standard in the medical industry and is known for its cloth-like feel and excellent drapeability.
