

Rigid Telescopes

The Hopkins® II 5-mm telescope offers improved optics and a larger number of fibers to deliver significantly increased brightness and enhanced image quality. A new double-lumen stainless-steel shaft makes the 5-mm telescope significantly more durable, which can help reduce repair costs. Advantages of the 5-mm telescopes include distortion-free images, sapphire lenses for autoclavability and scratch resistance, clear images through the entire depth of field, and a 5.2-mm OD that fits all 5-mm trocars.
