

Catheter Securement Device

Designed specifically for use with any PICC catheter, the Centurion® WingGuard® PICC Catheter Securement Device is extremely easy to apply and remove. Its non-stick surface material does not stick to dressings during removal, allowing for clean removal of dressings without any extra complications. The device's pliable construction conforms comfortably to the body and the low profile design minimizes bumping and jostling to the site. Its strong yet patient-friendly adhesive keeps the device in place for long wear times. The WingGuard is available packaged individually sterile or as part of a complete Dressing Change or PICC Insertion Tray.
