

Irrigating Endothelial Stripper

The Rosenwasser Irrigating Endothelial Stripper (K7-5897) is designed to strip the endothelial layer during Descemet's Stripping Endothelial Keratoplasty (DSEK) procedures. It features a thin, semi-circular tip which is angled 90 degrees upward from the irrigation tube to gently peel and remove the endothelial layer. The 20 gauge irrigation tube assists the surgeon in maintaining the chamber during the procedure, thereby reducing the dependence on viscoelastics.
