

## Stereoscopic LCD Monitors

The models SD2020 and SD2320W StereoMirror 20- and 23-inch wide monitors represent the latest advancements in 3D stereoscopic LCD display technology. These monitors deliver enhanced stereo image quality by offering greater resolution and enlarged screen-space, which is beneficial for photogrammetry, image exploitation, complex visualization, 3D simulation and radiographic investigation. The SD series offers improved image sensitivity and precision, especially in difficult radiographic exams such as mammography.
