

Safety Products for Healthcare Settings

PG LifeLink's healthcare products make life safer for patients and hospital staff. The company offers its Isolated Power Systems, Patient Service Consoles and other OR equipment. Isolated Power Systems provide essential electrical fault protection required in "wet" operating room settings. The systems protect against a first fault to ground while continuing to supply power to vital medical equipment; an integrated alarm provides notification for quick fault correction. Patient Service Consoles provide safe and convenient access to receptacles, medical gas outlets, nurse call units, and other electrical and mechanical devices needed for patient care. The consoles allow hospitals to address a variety of patient care needs in a single wall mount. In addition to Isolated Power Systems and Patient Service Consoles, PG LifeLink provides NFPA code-compliant Digital Clock Timers and X-Ray Film Viewers, as well as OR safe Stereo Systems, all of which provide convenience and safety with proper power supplies for OR settings.
